Assumptions

- Willingness of businesses and households to adopt new eco-friendly technologies and practices.

- Ability to establish successful partnerships with key players in the food service and retail sectors.
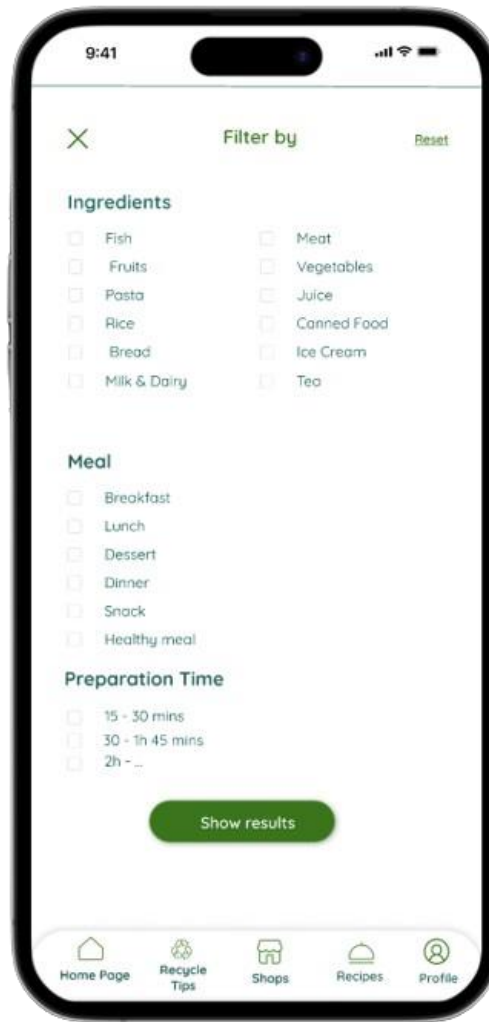

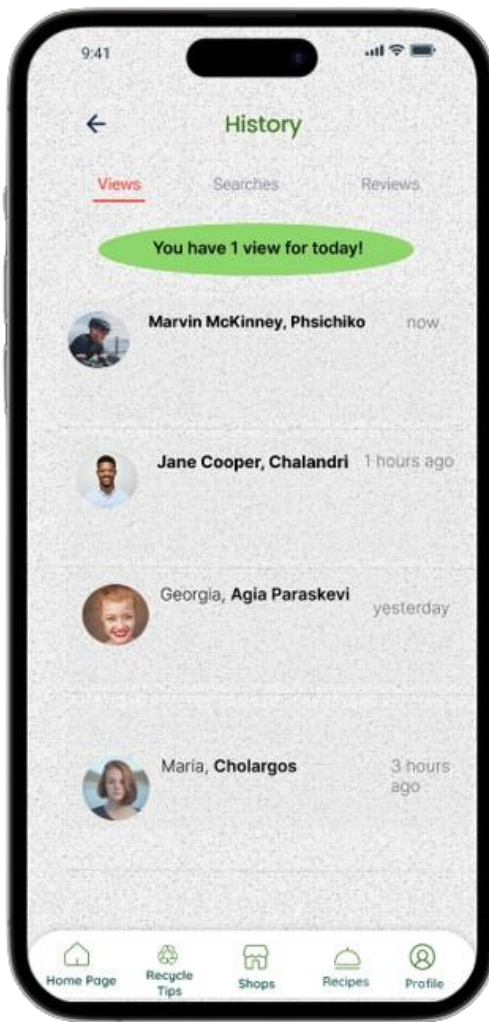

- Availability and effective integration of required technology (smart inventory systems, machine learning algorithms).

- Revenue streams from transaction fees, advertisements, and subscription plans are sufficient to cover operational costs and generate profit.

Constraints

- Complexity of adhering to food safety and waste management regulations across different regions.

- Efficient logistics for the redistribution of near-expiration food items.

- Significant financial investment required for initial development and ongoing maintenance.

- Necessity of robust data protection measures to ensure privacy and security of user data.
